

```
«interface»
DataFetcherService

+fetchPrices(symbol: String,
startDate: String,
endDate: String): List<Price>
+isAvailable(): boolean

{fetchPrices retrieves daily prices
from Yahoo Finance API.
isAvailable checks network connection}
```

```
«interface»
ShareRepository

+savePrices(prices: List<Price>): void
+getPrices(symbol: String,
startDate: String,
endDate: String): List<Price>
+hasData(symbol: String,
startDate: String,
endDate: String): boolean
+deleteData(symbol: String): void

{savePrices stores data locally.
getPrices retrieves cached data.
hasData checks if data exists}

«interface»
ChartComponent

+renderSingleChart(
prices: List<Price>,
title: String): void
+renderComparisonChart(
pricesA: List<Price>,
pricesB: List<Price>,
title: String): void
+clearChart(): void

{renderSingleChart displays a line
chart for one company.
renderComparisonChart plots two
companies on the same chart}
```
